## **Determining factors for animal height & growth:**

The height & growth of a creature is determined by his or her genetics and it is observed that a creature stops growing after reaching the puberty age. But there are other factors that influence growth such as malnutrition & hormones which equally play important role in body's growth.

## **Limitations of average height & growth:**

Having an average height & growth does not contribute to a striking personality. Although being short in growth & height is not a disease or a shortcoming, moreover, a creature can fulfil many physical activities with less effort if they have a good built.

## **Advantages of homoeopathic medicines:**

Homoeopathic medicines are natural and do not cause any side effects. Moreover, they can be taken for long duration without any fear of addiction. Most of the homoeopathic medicines are derived from natural components and hence these medicines have a holistic approach towards treatment. The Homeopathic medications are safe which can be administered to little babies and even to pregnant mothers.

## **Role of homoeopathic medicine for height & growth:**

The homoeopathic medicine acts on the four sphere:-

1. Improves absorption of all the nutrients: Our homoeopathic medicine improves the digestive mechanism to ensure highest level of absorption of all the available macro & micro nutrients from the food & its optimum assimilation by the entire body cells.
2. Increase growth hormones production : Our homoeopathic medicine stimulates the pituitary gland to increased production of growth hormones, which helps growth of the vertebrae and the long bones of the body.
3. Cartilages growth: Our homoeopathic medicines have the ability to promote better strength and durability in the cartilages so that the proper structure of the body is maintained. The articular cartilages can grow thicker on both ends, at the distal end & the proximal end that connect many bones & each vertebrae.
4. Spinal column extension: Our homoeopathic medicine allows height & growth by expanding the inter - vertebral discs and lengthening your spine. It is commonly stated that, thicker the discs, the longer your spinal column is and the taller you become.

## **Regular uninterrupted Homoeopathic medicine course for Puppy, Kitten or Foal:**

Appropriate age:	Start the course on completion of two week age.
Medicine Dosage:	6 pills, 3 times per day.
Course Duration:	for Puppy is 6 months. for Kitten is 6 months. for Foal is 18 months.
